

Global Superstore Sales Dashboard - Project Report

Author: Jaimin Valand

Tool: Microsoft Power BI

1. Project Overview

This project analyses the Global Superstore dataset using Microsoft Power BI. The objective is to provide interactive dashboards for monitoring sales, profit, orders, customers, products and regional performance.

2. Dataset

The dashboard uses the Global Superstore CSV dataset containing order, customer, product, region, market and shipping information.

3. Dashboard 1 – Executive Dashboard

Includes KPI cards for Total Sales (£12.64M), Total Profit (£1.47M), Total Orders (25K) and Total Customers (5K). Visuals include yearly performance table, monthly sales trend, Top 10 sub-categories, market treemap, shipping days by region, country map and Top 10 products.

4. Dashboard 2 – Product Details

Allows product-level analysis using a product slicer. Displays customer orders, monthly sales trend and product sales by region.

5. Dashboard 3 – Regional Analysis

Displays regional KPIs, sales distribution map, regional performance summary, regional profit and average shipping days by ship mode.

6. Key Findings

Phones generated the highest sales among sub-categories. Central region shows the strongest performance in several visuals. Monthly sales trend increases throughout the period. Standard Class has the highest average shipping days.

7. Conclusion

The dashboard provides an interactive view of sales performance, customer orders, product performance and regional analysis to support business decision-making.

Project Viva / Interview Questions & Answers

Why did you build this dashboard?

To provide management with an interactive dashboard for analysing sales, profit, customers, products and regional performance.

Why did you choose Power BI?

Power BI offers strong data modelling, DAX calculations, Power Query transformations and interactive visualisations.

What KPIs are included?

Total Sales, Total Profit, Total Orders, Total Customers and Shipping Days.

Which charts did you use?

Cards, line chart, bar charts, treemap, map visual, matrix tables and slicers.

What business value does this dashboard provide?

It helps stakeholders identify high-performing products, profitable regions, sales trends and operational performance.

What dataset was used?

The Global Superstore dataset in CSV format.

How can this dashboard be improved?

Forecasting, drill-through pages, row-level security and additional KPI alerts.
